Personalized lighting from **USAI Lighting** was designed to stimulate the senses and promote well-being by using Color Select, a technology that allows this architectural LED downlighting fixture to offer independent control of color temperatures and intensity. Designers can match light with different styles and moods; for example, the color temperature can be tuned down to emphasize cozy ambiance in a kitchen or bathroom. Color Select is available with the company's BeveLED 2.0 fixture collection and offers precise optical control, fixture-to-fixture color consistency and a tunable white color temperature. **Circle No. 278** or visit kbbonline.com/freeinfo

Biu Bathworks has introduced Electronica, a range of digital applications for the sink, shower and bathtub faucets. The faucets are regulated by a digital controller, which allows the user to control the water flow and temperature via their smartphone or tablet for up to three individually saved settings. The digital interface can be preset to the user's preferred temperature, flow rate and duration to customize the experience and promote water efficiency. **Circle No. 279** or visit kbbonline.com/freeinfo

LIKE NOTHING ELSE. FROM NO ONE ELSE.

Stunning, exclusive designs that excite and WIN customers

Self-expression. Customers crave it. And Facets* delivers. Our proprietary process digitally prints directly on cabinet doors and panels – opening the door to dramatic, personal designs. Facets combined with Custom Cupboards cabinetry provide the perfect blend of functionality and style.
