Infinite Possibilities

Taking control to new levels, **USAI Lighting's** Infinite Color+ downlights combines white light that can be tuned to any color temperature from 1800K to 12000K with the ability to change the actual hue produced to any color in the spectrum. Available with products in the BeveLED 2.0 fixture family, Infinite Color+ can be managed with any industry standard DMX512 control system.

→ Visit www.usalighting.com or **Circle 291**.

Is the preference for incandescent color in residential applications based on an actual color choice, or simply familiarity coupled with the failure of other technologies to deliver?
