Color Select

One Five One

JUDGES' COMMENTS

► "Color tuning is clearly the wave of the future, but not all are ready to storm the beach-head. Graceful field applications greatly help."

Part of a new breed of workspaces where the lines between residential and commercial are blurred, the vision for 151 West 42nd St. was to redesign the space into a 45,600-sq.-ft. artisanal food hall, cafe; bar and flexible events space designed to create community within the building where its tenants could work, play and thrive with a signature experience elevated by the subtleties of human-centric lighting and design.

USAI Color Select tunable white LED technology's ability to mimic the sun's natural light allowed designers to curate highly personalized light scenes. Each of the light scenes aimed to trigger emotional responses that aligned with the daily activities taking place in the amenity space: early morning set up is set to a light orange to emulate the sunrise; lunch is set to

an energizing sky blue light; happy hours are set to a warmer tone with rich magenta; and the final setting, lounge, creates a warm, seemingly candlelit ambiance.

To further integrate the iconic Gehry structures, the Loop Lighting design team illuminated its curves with an indirect strategy. Using BeveLED Mini Color Select LED adjustable downlight's varying beam distributions aimed on the white table top surfaces and the White American Oak floors, Loop Lighting team was able to introduce a soft uniform and indirect light level that gently illuminates all of the curves in the irregular form—bringing the structures to life.

Insight Lighting
Adobe

Designed as an homage to Southwestern architectural styles, the Adobe suspended linear pendant features a streamlined, curvilinear profile with no visible hardware. The fixture is available in three lengths and four finishes, with either direct/indirect or direct-only lighting distributions. Available lumen packages offer up to 15 watts per foot, with an optional micro-louver and either brushed brass or aluminum end posts.

→ Visit www.insightlighting.com or **Circle 209**.

Judges' Comments: "Very striking."

USAI Lighting
BeveLED Block

The BeveLED Block fixture completely encloses surface-mounted junction boxes in concrete ceilings, creating a cleaner-lined option for exposed-ceiling settings. The fixture's adaptive design allows conduit cutout slots to be customized in the field and is available in both square and round profiles.

DMF Lighting
DRD5S Surface Mount LED Area Light

The new, ultra-thin DRD5S 8-in. Round and 18-in. Linear models were designed for 24/7 operation in multifamily installations. Versatile to fit applications with limited plenum space, the DRD5S delivers 1500 lumens of 90 CRI LED light. The edgeless DRD5S sits only 0.6 inches below the ceiling line for a minimal aesthetic, allowing it to blend in.

Gotham Lighting/Acuity Brands
INCITO and EVO Cylinder Family

The INCITO and EVO Cylinder family of lighting heeds the call of open ceiling spaces with the ability to scale and mount in different field conditions, featuring varied light distribution, lumen output and multiple shape and finish options. Cleanly-designed, covers conceal unsightly conduit fittings and/or surface-mount junction boxes. The fixtures features a patent-pending suspension cord with an internal steel cable that makes the outer jacket extremely thin for a cleaner appearance.

→ Visit www.gothamlighting.acuitybrands.com or **Circle 206**.

Judges' Comments: "Well thought-out thermal management using passive means."

USAI Lighting
USAI Incline for Sloped Ceiling

The Incline for Sloped Ceiling housing incorporates a patent-pending, built-in leveler and lockable tilt setting to enable parallel-to-ceiling installation in sloped-ceiling applications. Available for the BeveLED Mini and BeveLED 2.2 fixture families, the housing allows for an unobstructed beam spread in angles from 25 degrees to 90 degrees, with both round and square trims available.

→ Visit www.usalighting.com or **Circle 212**.

Judges' Comments: "Great idea and well thought out."

EDITOR'S OBSERVATION:

IT IS GOOD TO SEE MODULARITY IS NOT DEAD. FUTURE-PROOFING FIXTURES IS A MUST GIVEN THE CONTINUOUS ADVANCEMENT IN TECHNOLOGY.

Luminis
Multilux

Multilux fixtures are available in five configurations to provide multiple lighting options for high-ceiling applications. Each fixture head is individually controllable, so specifiers can choose different beam angles and optics within the same luminaire. And each head also offers 358-degree rotation capability, with a 30-degree tilt, for precise light positioning. Units can be surface or pendant mounted.

DMF Lighting
SquareFrame System LED Downlight

The SquareFrame is the perfect foundation for an interchangeable system of modules and trims that give you endless choice over how your lighting works. The housing is smaller than the competition and fits into the most physically restrictive environments. Precision installation is made faster with a suite of features that work together seamlessly to give you a flawless fit more quickly and with less hassle.

→ Visit www.dmflighting.com or **Circle 210**.

Judges' Comments: "A lot of thought went into both design and operating characteristics."
