

## TrueZero360 Fixtures | USAI Lighting

TrueZero360 is dampness and wet environment rated for use in bathrooms and other high-humidity environments in the home.

TrueZero360 is USAI's newest Quiet product, producing 360 degrees of comfort from every viewing angle within a space. The recessed lighting fixtures come packed with over 2,000 glare-free lumens thanks to the company's 4-part patented optical system known as Quiet Comfort Optics and provides the perfect balance of performance and visual relaxation, according to USAI.

The 3-inch aperture square is available in two trim aesthetics—00-inch recess and 3/8-inch recess—and can provide [downlighting](#), [wall washing](#) or [adjustable lighting](#) in a space. The apertures can then be affixed with USAI's Classic White, Warm Glow Dimming, Color Select Tunable White and Infinite Color LEDs to match the lighting needs of any space.

USAI's patented reflector system allows the light to be set in a variety of directions—with 25-to-60-degree adjustable beam spreads—and helps eliminate 82% of backlight and scatter when directed at a wall surface. The company notes that with this, the light source and fixture interior nearly disappear into the ceiling while maintaining a subtle luminance on the lens.

TrueLight360 also meets WELL Building Standards in the lighting category, offering a human-focused lighting option certified by national standards.
