11 Radiant Launches to Discover at LightFair and Beyond

With LightFair's 2023 trade show beginning on May 25, take a look at these electrifying fixtures before they hit the show floor.

By [MADELEINE D'ANGELO, ANDREA TIMPANO](#)

With New York's [LightFair](#) conference beginning on May 21 and its trade show kicking off on May 25 in the Big Apple's Javits Center, we're previewing this year's launches. In addition to the luminaires on display from more than 300 exhibitors, 75 of which are first-timers, the annual show will include seven immersive, lighting-based installations created by lighting designers and brands reflecting on the theme "Circular Economy." Attendees will also be able to explore the event through LightFair's new "lightineraries" program, which aims to combine [the exhibition's educational and networking elements](#). Before the show begins, take a look at what exhibitors will have on display in New York and beyond.

Do not be fooled by the munchkin-like size of these recessed fixtures: Despite apertures measuring just 1¼ inches, each head provides up to 1600 lumens. Available in warm dimming and classic white LED color options, the miniature lights can be specified in round or square shapes with trimmed and trimless finishes including matte white and black, specular black, and specular silver. usailighting.com
