Bright White

In the world of lighting, color-curve dimming is the holy grail. USAI Lighting offers variable white-color technology that starts cool at full output and warms as it dims, replacing compact fluorescent and incandescent bulbs with a single LED fixture. The BeveLED Mini has interchangeable optics for adjustable accent and wallwash applications, with a 3-inch round- or square-aperture recessed downlight that offers 700 lumens at 12W and 950 lumens at 18W. Color-curve dimming starts at 3500K and dims to 2200K. Dimming drivers also are available, with wet location and emergency trim options in

white, statuary bronze, black, metalized gray, and custom RAL color finishes. USAI Lighting.
