

Top 10 Green Products Named

Healthier insulation and better-performing air barriers are among the winners of BuildingGreen's Top-10 Green Building Products awards for 2015.

The 13th annual awards recognize green building products that make fundamental transformations to "business as usual" in the design and construction industry.

Several of the top products, including Johns Manville's ENRGY 3.E polyiso insulation, eliminated halogenated flame retardants, a longstanding health and environmental issue.

Prosoco's fluid-applied Cat 5 air barrier system contains no solvents, isocyanates or phthalate plasticizers, and it can be applied to damp surfaces.

Cascadia Clip fiberglass thermal spacers help install cladding over insulation, significantly reducing the thermal bridging through the insulation as compared with conventional attachment methods.

Marvin was honored as the first company to offer Passive House Institute U.S.-certified windows.

Other Top 10 picks included metered solar panels from the Clean Energy Collective that can be installed remotely, reformulated foam cushions from Ekla Home, petroleum-free plastic chairs from KI, Multistack MagLev centrifugal chillers, [USAI's](#) Color Select tunable lighting, and FocalPoint's high-flow-rate biofiltration system, which is designed to treat stormwater in dense urban areas.
