

### Warm Glow Dimming

Offering a customizable LED color palette within a range of 2,200K to 3,500K, USAI Lighting's patent-pending Warm Glow Dimming technology is now available for the BeveLED 2.0 and BeveLED Mini downlight families. Utilizing the company's proprietary algorithm and circuitry, Warm Glow Dimming precisely mirrors the black body curve of a standard incandescent when dimmed from 2,700K or 3,000K down to 2,200K, providing incandescent-like warmth to any space.
