## LED Fixtures + Components

### One Singular Illumination

The One LV is a new linear lighting product designed to make installation in complex spaces easier and more discrete. The LED fixture from **USAI Lighting** measures 5/8-in. high x 1-in. wide, and in lengths ranging from 6 in. to 4 ft. The dovetail connection system allows installers to connect appropriate lengths on the floor so entire sections can be installed at one time. Color temperature options include 2700K, 3000K and 3500K, with high-output LEDs producing more than 300 lumens per foot, and multiple dimming and non-dimming remote power supplies are available.
