NanoLED from USAI Lighting offers the design features of
NanoLumen and the performance benefits of BeveLED. With a small
2 1/2" aperture, the luminaire has a proprietary aluminum heat sink that
dissipates twice as much heat as traditional die-cast aluminum,
maximizing the lifespan of its LEDs. Its light engines are field
replaceable, and its plug-and-play trim assemblies allow it to
transition between downlight, adjustable, and wall-wash functions.
Interchangeable reflectors, which range from 20 to 52 degrees,
allow light adjustment based on task or application. The lighting
line is available in round, square, trimmed, and trimless options.
