New #Luxury Design Product Spotlight: Week of March 2nd

March 3, 2015

Weekly my inbox fills with notice of great new products being introduced to the market. And as much as I'd like to devote space in our quarterly magazine [theTwentySIX](#), there just isn't enough space. The result? Every week check this spot for the newest product introductions. And if you'd like to see your product here... make sure to [email](#) me the press release and necessary photos.

BeveLED 2.0 FLA, Recessed LED Fixture from USAI Lighting

Courtesy USAI Lighting

Integrated lighting is the bane of nearly every interior designer and architect in existence, especially in spaces where clearances are tight or nearly non-existent. Oftentimes, low ceilings, ductwork, electrical, and building infrastructure get in the way of what could be the nearly perfect lighting plan. The implementation of LED lighting with their bulky heat dispersion systems can make the situation even worse. **USAI Lighting**, to meet the growing requirement of LEDs as a primary lighting source, has designed **BeveLED 2.0 Flat**, dubbed the world's thinnest LED housing, to answer this growing problem. With an overall height of 2-3/4" (or 3-3/8" with trim) BeveLED 2.0 Flat fits an LED light source available in four color temperatures and using from 12 to 33 watts delivering up to 2,350 lumens into a housing suitable for nearly any construction requirement, even shallow ceiling soffits and existing wood frame construction. Square and Round trims are available in sizes ranging from 3-1/2" to 5-1/2" (square or diameter).
