Paint The Town Any Color You Want

Every season, the design community anxiously awaits Pantone's "Color of the Year" announcement. Then, the

shopping begins—and whether it's paint, wallpaper or textiles, it better be available in the coveted hue. (The choice for 2017 is "Greenery," if you haven't been keeping tabs.)

Could new lighting technology be the ticket to a world without the annual scramble to refinish walls and reupholster furniture? At least one manufacturer thinks so. This year, USAI Lighting detailed the exact RGBW combination needed to paint a space with "Greenery" using its Infinite Color+ product: a splash of red (value 0), green (value 255), blue (value 4) and white (value 110). The solution (pictured) seems like a good way to stay on top of the color trend—buckets of paint thinner not required.
