The LittleOnes

USAI Lighting

What the iPhone was to the cell phone industry, the LittleOnes is to the home technology and lighting industry. Since LED lighting made its world-changing debut, the lighting industry has been working to minimize the size of fixtures, without sacrificing power, utility, and efficiency. In June 2021, USAI achieved an industry milestone and set the new standard for high-powered, tiny LED fixtures with the introduction of the LittleOnes—the first collection of barely noticeable, 1-inch-wide, architectural-grade, recessed light fixtures that can deliver over 1,000 lumens without glare. High levels of light are needed for circadian lighting and lots of light usually means lots of glare, but not so with the LittleOnes. This technology is revolutionizing the at-home lighting experience.

“This is the perfect product for projects where you’re not trying to draw so much attention to the fixture itself.” —Alison Von Glinow
