Quiet Comfort Optics™

5-Part Patented Wall Wash Optical System

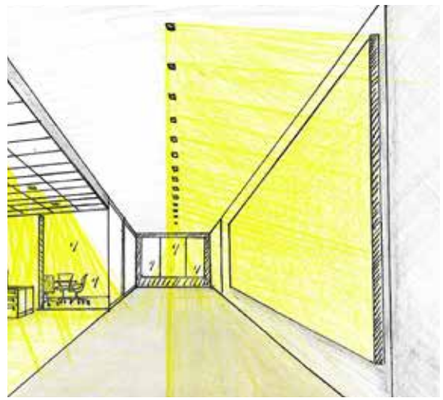

The technology behind 360° comfort

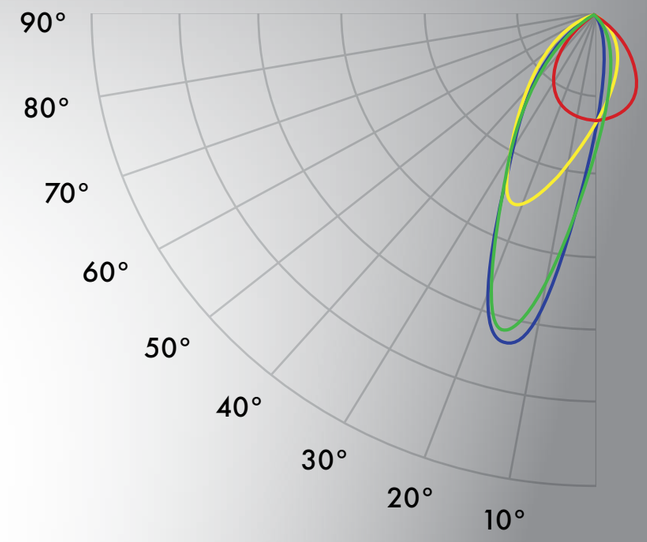

How does innovation begin at USAI?

It begins with curiosity and a vision. We wanted to make the perfect wall wash. So, we let our imaginations start with incredibly lofty goals, and then we got to work. USAI engineers pushed boundaries and applied fresh thinking to develop an extraordinary wall wash, and then adapted the technology to create 360° of glare-free downlight and adjustable fixtures. This means comfortable lighting from every viewing angle.

Curious how it works?

LED light naturally spreads in 180° directions. The Quiet Comfort Optical™ System harnesses and controls the light efficiently – placing light where you want it. This 5-part patented system fully directs light on the wall from multiple controlled directions. Beams are focused and framed while preventing unwanted brightness from bouncing back in the room.

82%
light on the wall

Choose What You See.

Light Where You Want It.

RESULTS: An exceptional wall wash designed for a premium experience—solving typical wall wash challenges.

Perfectly Illuminated Wall – lights high and wide, top to bottom. Providing exceptional uniformity horizontally. Brighter at eye level allowing the eye to travel where you want it, while gradually illuminating up and down the wall with less intensity. No scalloping.

Increased Efficiency – 82% light distribution is focused directly on the wall. Eliminates backlight and scatter.

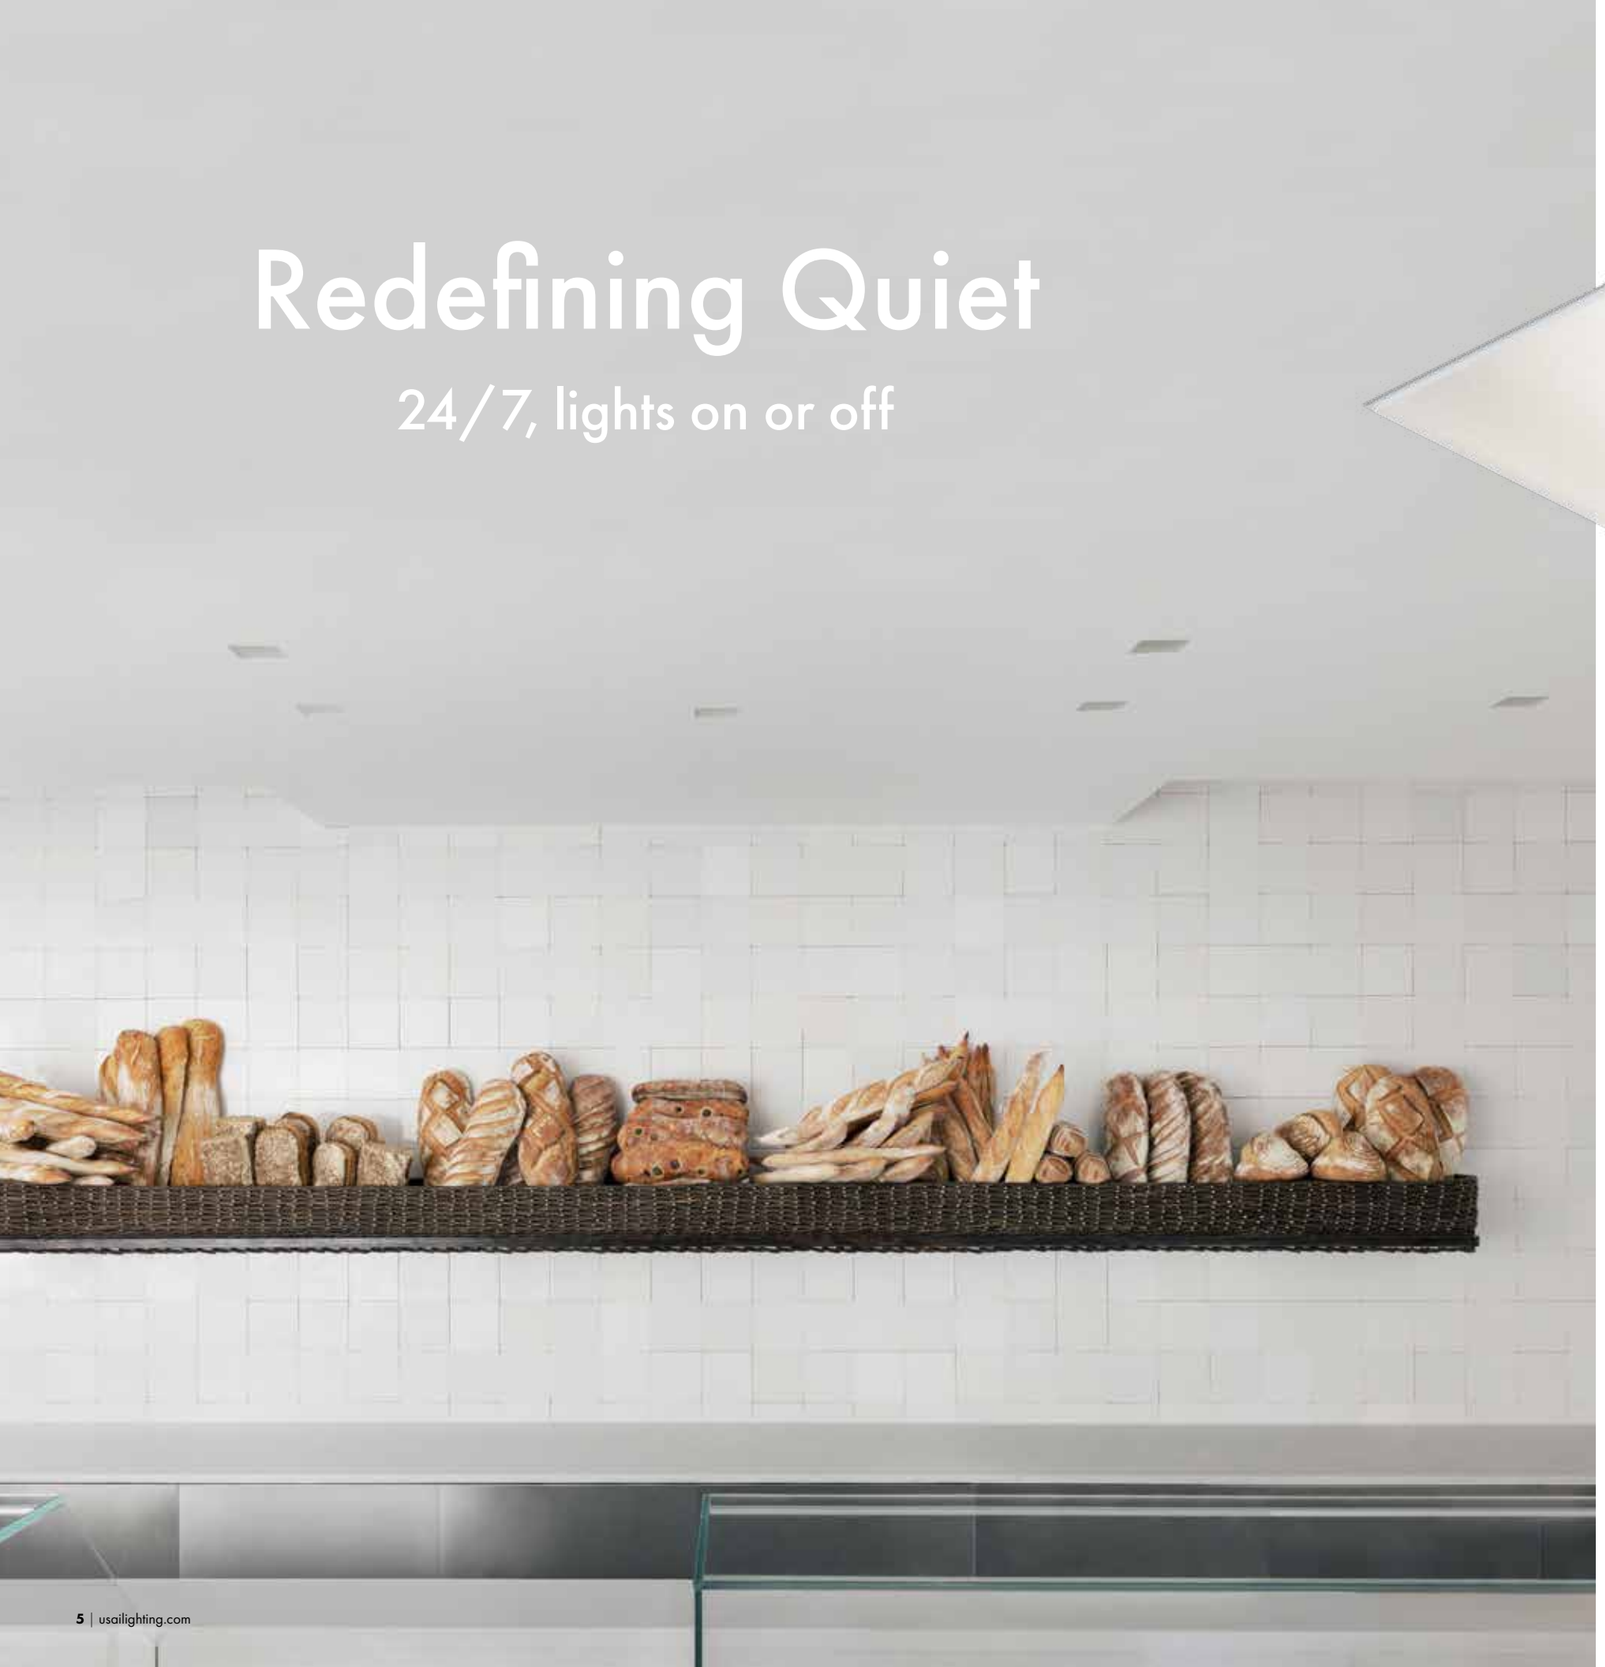

360° Glare-Free Comfort – Occupants can walk, sit or work under this wall wash with extraordinary visual comfort from advanced glare control.

Fixture Location Flexibility – Install as close as 12" away from the wall without compromising performance. Suggested distance is 24"–36" away form the wall for 8′ to 12′ walls.

Eliminates backlight and scatter

Redefining Quiet

24/7, lights on or off

TrueZero360® Design

Elevating the Bar for Quiet Ceilings

Quiet Comfort™ Optics for Downlight and Adjustable

Similar to the Wall Wash, the Downlight and Adjustable have optics positioned at a greater distance from the flush glass as well as detailed design elements to create advanced glare control to provide 360° of comfort.

Pristine Below-the-Ceiling Appearance

The Truly Zero flush glass aesthetic aligns with the ceiling and hides the internal engineering of the fixture – providing one singular visual identity for downlight, adjustable, and wall wash.

Quiet 24/7 Lights On/Off:

This unique design results in a clean monolithic ceiling whether the lights are on or off across the entire product family. When lights are on, within its unique internal design, the light source and fixture's interior nearly disappear while maintaining a subtle luminance on the lens. When lights are off, the fixture's interiors and flush solite glass blends into the ceiling.

TrueZero360 are forever discreet – elevating the bar for quiet ceilings.
