**HOUSING INSTALLATION:**

1. Mount fixture housing according to ceiling type.
   - Nailer bars are supplied for sheetrock installations. To install nailer bars, slide bars thru slots in butterfly brackets and lock in place with 8-32 screw.
   - C-channels (optional) are available.

   *See IMPORTANT note below*

2. Install power cable conduit to J-box, ensure conduit slack allows for minimum of 6’ travel for through aperture servicing
3. Make power supply connections in housing J-box compartment and re-install J-box cover.

**APERTURE COLLAR ADJUSTMENT:**

**STEPS TO ADJUST THE APERTURE:**

1. To adjust collar, loosen, BUT DO NOT REMOVE, screws with flat head screwdriver (or ¼” hex nut driver).
2. Adjust height of collar so it is flush with ceiling.
3. Tighten screws to hold collar height position.

**CEILING CUTOUT FOR NCSM2 MILLWORK HOUSINGS:**

**Millwork Round:** 4-13/16”Ø

**Millwork Square:** 4-13/16” x 4-13/16”

**TRIM INSTALLATION:**

1. It is recommended that when ceiling installation is completed including all sanding and painting, the overspray protective insert can be removed.
2. Remove reflector.
3. Attach safety cable.
4. Re-install safety cable.
5. Install trim assembly by pushing into spackle frame engaging ball spring plungers.

**IMPORTANT:**

*DURING INSTALLATION APERTURE COLLAR MUST SET FLUSH TO CEILING*

= through aperture keep out area

Must be set flush to ceiling
