USAI Lighting has designed and engineered the shallowest LED housing for recessed lighting in the world—Meet BabyLED. Measuring 2” tall and 3” to the finished ceiling, BabyLED can help you integrate great lighting with ductwork, building infrastructure, and electrical with ease, in any plenum space—anywhere.

USAI’s Flat housing enables the introduction of industry-leading classic white, consistent, high performance LED lighting to any space—no matter how tight. Also available with USAI’s patented Warm Glow® Dimming color technology, which provides the warmth and glow of incandescent lighting.

**Meet the World’s Shallowest LED Housings**

With USAI Lighting’s family of Shallow Fit® housings, there is no need to lose precious ceiling height—Even with insulation!
Our Color Select® products allow users to adjust color temperature from 6000K down to 2200K while independently adjusting intensity to achieve ultimate control over the quality of light in a space with a single fixture type.

Our Warm Glow Dimming® products precisely mimic the black body curve of a standard 100W A19 lamp by gradually transitioning from 2700K, 3000K or 3500K down to 2200K. The result is virtually indistinguishable from an incandescent light source.

Illuminate your space with any color available in the spectrum with Infinite Color+. Tune the light from saturated blue, violet, green, yellow, orange, and red, to any of a wide variety of perfect architectural whites with flexibility for any application.

Our proprietary LED light engines achieve a 2-step MacAdam ellipse along the black body locus, resulting in reliable and uniform color fixture to fixture. You’ll see the results in consistently beautiful light throughout your space, whichever USAI LED product you specify.

We take LED performance and intensity to unprecedented new levels with Max Output, putting long lasting, energy-efficient, mercury-free solutions in play for airports, atriums, ballrooms, lobbies, and other spaces with high ceilings that require maximum lumen output.

Our Point Perfect beam control combines our proprietary, industry-leading LED light engines with our patent-pending optical systems to give specifiers a tight, 10-degree beam with precise optics—in apertures as small as 2.5 inches. Point Perfect delivers the sparkle and precision formerly available only in tungsten halogen and metal halide point sources with energy-efficient LED.

USAI Lighting has designed and engineered the thinnest recessed LED downlight housings in the world. Our Shallow Fit solutions help you integrate great lighting with ductwork, building infrastructure, and electrical with ease, in any plenum space.
